ADDCOMP to further expand production capacity

Nijverdal, The Netherlands, July 6th, 2007: **Addcomp Holland BV**, manufacturer of Polymer Additives Solutions, proudly announces the decision to increase production capacity significantly.

Although our new factory, opened in June 2006, provided a significant increase in our production capacity, we now continually operate at full capacity to meet current demand for our products. Our 4th extrusion line is planned to come on stream in October 2007 and our 5th extrusion line early 2008.

The new lines will enable us to develop our strategic sales growth in selected global market segments and widen scope for product development and customer trials.

Addcomp Holland BV provides a wide range of Polymer Additive Solutions in masterbatch or compacted form to the polymer industry: polymer producers, additive producers and polymer converters. End use markets include automotive, consumer, agricultural, construction, electrical & electronic, and other industrial markets.

We thank you for your interest and look forward to being of service to you in the near future.

We also invite you to visit our [new website: www.addcomp.nl](http://www.addcomp.nl)

Kind regards,

Jan Tijhuis and Paul Stassen
Director Operations Director Marketing and Sales
